

ON-SCREEN INTENT

Two containers can look the same. SpectraPass asks the material itself for evidence before installation.

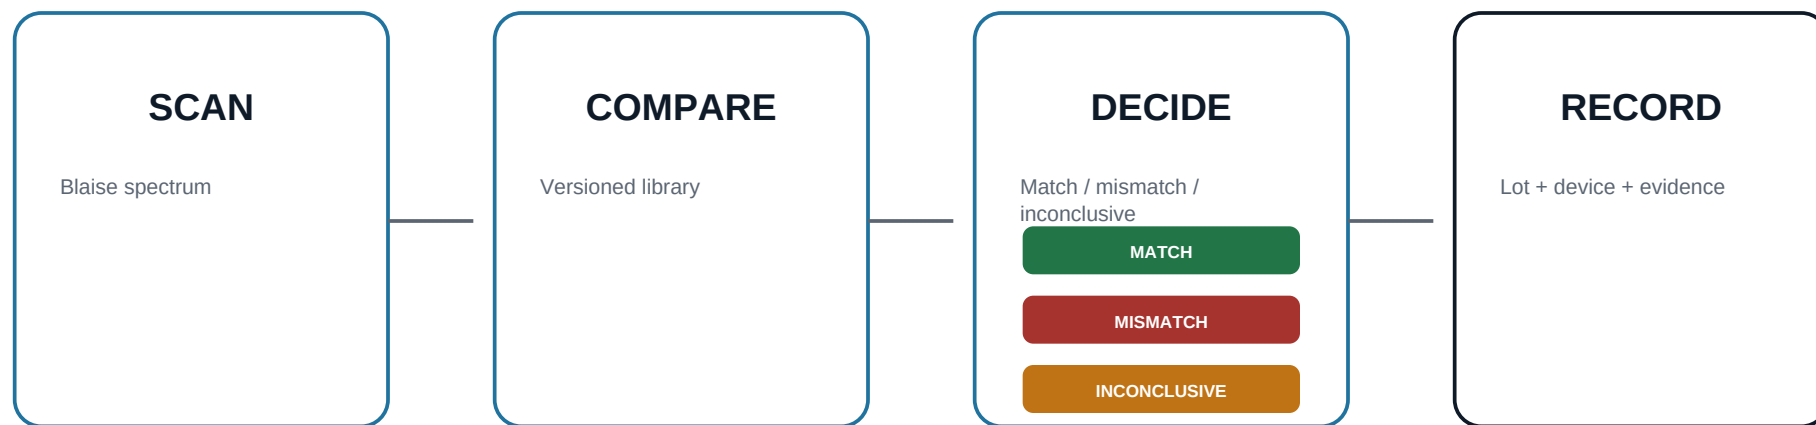

All containers, labels, spectra and UI are synthetic concept graphics. No claim that the prototype already runs on Blaise hardware.

ON-SCREEN INTENT

Paperwork supports provenance, but point-of-use identity can still fail between storage and use.

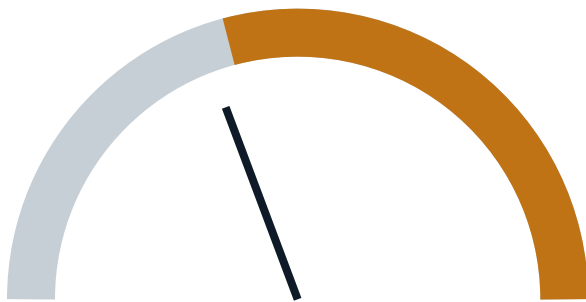

All containers, labels, spectra and UI are synthetic concept graphics. No claim that the prototype already runs on Blaise hardware.

ON-SCREEN INTENT

The decision is operational and auditable, not a safety certification or generic chemistry claim.

All containers, labels, spectra and UI are synthetic concept graphics. No claim that the prototype already runs on Blaise hardware.

INCONCLUSIVE

below validated decision threshold

SAFE FAILURE MODE

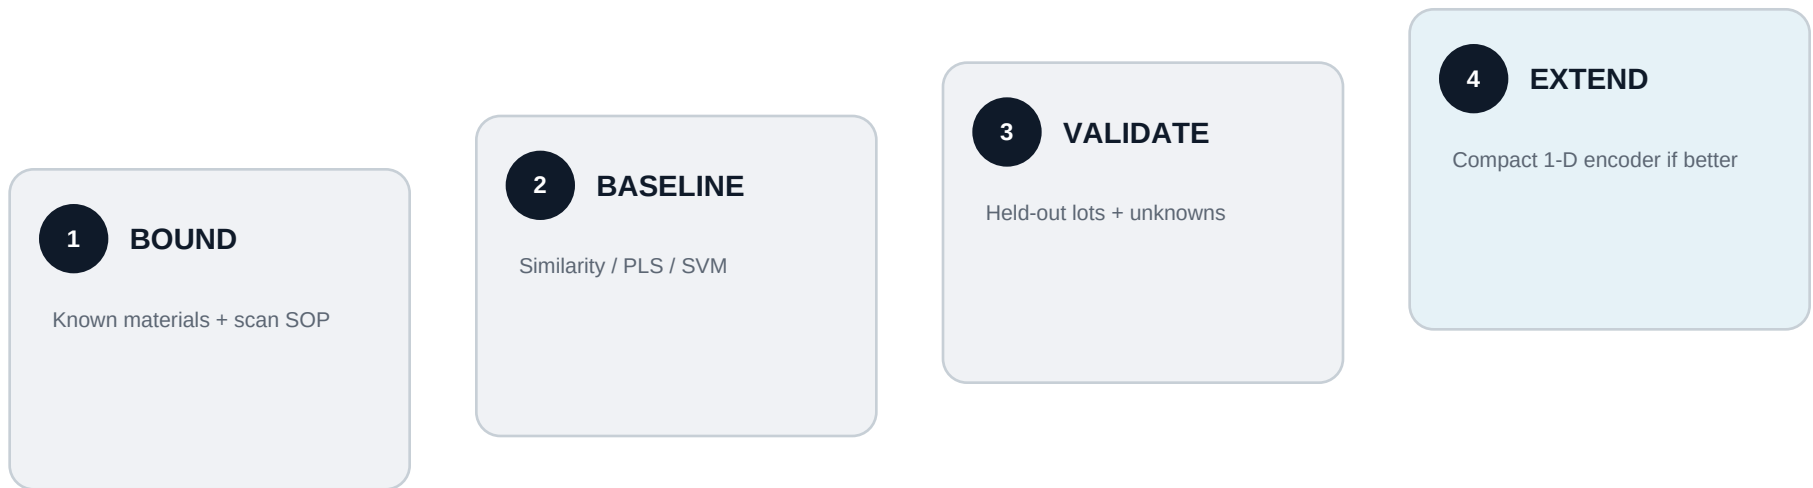

- Unknown material
- Reference drift
- Weak / noisy match
- Outside validated library

[Route to existing verification process](#)

ON-SCREEN INTENT

The key AI behavior is calibrated abstention: uncertainty becomes a workflow, not invented certainty.

All containers, labels, spectra and UI are synthetic concept graphics. No claim that the prototype already runs on Blaise hardware.

ON-SCREEN INTENT

Phase II deliberately starts with reproducible classical baselines and adds neural complexity only when evidence supports it.

All containers, labels, spectra and UI are synthetic concept graphics. No claim that the prototype already runs on Blaise hardware.

B2B SITE SUBSCRIPTION

- Reference libraries
- Audit retention
- Team administration
- Enterprise integrations

OPERATING TARGET

$$250 \times 4 \times \$85/\text{mo}$$
$$= \$1.02\text{M ARR}$$

Target only - not current revenue or market-size evidence

ON-SCREEN INTENT

Close on the point-of-use value proposition; keep all economics explicitly framed as targets.

All containers, labels, spectra and UI are synthetic concept graphics. No claim that the prototype already runs on Blaise hardware.
