

THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

REQUEST FOR PROPOSALS (RFP) ADDENDUM

FAILURE TO RETURN THIS ADDENDUM IN ACCORDANCE WITH THE INSTRUCTIONS BELOW MAY SUBJECT YOUR PROPOSAL TO REJECTION

RFP Number: RFP062926KJM

Addendum Number: 04

Addendum Date: September 4, 2026

RFP Opening Date / Time: September 25, 2026, at 12:00 PM Eastern Time (ET)

Instructions: Return one properly executed copy of this addendum prior to the RFP Opening Date / Time specified above. This addendum may be included with your proposal, or it may be emailed separately to Kimberly Middleton at kimberly_middleton@unc.edu.

A. Please see the following University responses to all questions received by the deadline to submit written questions of July 20, 2026, at 12:00 PM ET:

1. Question: Please provide the anticipated timeline for contract award, contract execution, project kickoff, Phase 1 go-live, and Phase 2 go-live. Are there any fiscal year-end, month-end closing, grant, budget-cycle, or other blackout periods that should be considered during implementation?

Answer: Our goal is to award the contract by the end of the calendar year with Phase 1 go-live in 2027. We do not have an anticipated timeline for Phase 2 at this time. Fiscal year-end will need to be considered during implementation. The fiscal year ends on June 30.

2. Question: Please clarify the intended scope, sequencing, and pricing requirements for the implementation phases. Specifically, is Phase 1 limited to PO invoice automation and matching? Is Phase 2 intended to include non-PO invoice processing, departmental routing, coding, and approvals? Are both phases required as part of the award? Should pricing be provided separately for each phase? May the phases overlap, or must Phase 1 be completed before Phase 2 begins?

Answer: Yes. Phase 1 is limited to PO invoice automation and matching. Phase 2 is intended to include non-PO invoice processing, departmental routing, coding, and approvals. Both phases are required as part of this award, and Proposers should provide separate pricing for each phase. While the University is open to vendor recommendations regarding implementation sequencing, the University's intent is for Phase 1 to be completed before Phase 2 begins.

3. Question: Please identify the current invoice submission and/or accounts payable (AP) automation solution being replaced, including the current technologies utilized, existing OCR or automation tools, key business challenges driving the replacement, and whether this is a replacement initiative or deployment of net-new technology.

Answer: The University currently utilizes the Vendor Invoice Submission Page (VISP), a legacy invoice submission solution integrated with PeopleSoft. There are currently no OCR or other automation tools in use. The primary business challenges driving this initiative are high invoice volume, limited automation, the need to improve processing efficiency, and the reduction of user error. This initiative represents a deployment of net-new technology.

4. Question: Please clarify the overall scope of work. Is the scope limited to invoice processing and voucher creation, or does it also include approval workflows, supplier onboarding, payment execution, remittance processing, vendor communications, and/or management of the entire invoice-to-payment lifecycle?

THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

Answer: The scope of work must include invoice processing and voucher creation. Approval workflows are not in scope for Phase 1; however, the University is interested in understanding available capabilities and options for incorporating approval workflows in Phase 2. Supplier onboarding is not in scope for either phase. Payment execution, remittance processing, and vendor communications are not required as part of the scope, but Proposers are encouraged to describe their capabilities in these areas. The University is also interested in understanding the Proposer's capabilities for managing the broader invoice-to-payment lifecycle.

5. Question: Is the University seeking a commercially available AP automation software solution only, or will alternative approaches (such as Intelligent Automation/RPA-based solutions built on commercial platforms) be considered if all functional requirements are satisfied?

Answer: Alternative approaches will be considered if all functional requirements are satisfied.

6. Question: Please provide the following details regarding the University's PeopleSoft environment, including the PeopleSoft Financials version, PeopleTools version, PUM/update image level, hosting model, planned upgrades during the contract term, and whether the environment is managed internally or through a third party.

Answer: The University's current PeopleSoft environment is PeopleSoft FSCM 9.2, PUM 54, with PeopleTools version 8.61.05. The environment is hosted on-premises and is managed internally by the University. The University may upgrade to PUM 58 by the end of March 2027 and expects to be on PeopleTools version 8.63 by the end of 2027.

7. Question: Will the University provide development, test, UAT, and production PeopleSoft environments, associated credentials, test data, APIs, service accounts, and technical support resources to the selected Proposer?

Answer: Yes. The University will provide the selected Proposer with access to the necessary development, test, UAT, and production of PeopleSoft environments, associated credentials, test data, APIs, service accounts, and technical support resources required to support the implementation and integration activities.

8. Question: Please confirm that this procurement and the stated annual invoice volume of approximately 110,000 invoices apply solely to UNC-Chapel Hill and do not include invoice volumes from other UNC System institutions.

Answer: Correct. The stated annual invoice volume of approximately 110,000 invoices applies solely to UNC-Chapel Hill and does not include invoice volumes from other UNC System institutions.

9. Question: If other UNC System institutions elect to utilize the contract, please clarify whether Proposers should provide expansion pricing, base pricing on UNC-Chapel Hill volume only, anticipate separate tenants or configurations, and/or include volume discounts in their proposed pricing.

Answer: Proposers should price their proposals based on UNC-Chapel Hill's requirements and estimated invoice volumes as identified in the RFP. Participation by other UNC System institutions is voluntary and cannot be guaranteed; therefore, Proposers should not assume or include volumes from other institutions in their base pricing and are not required to provide expansion pricing. If another UNC System institution elects to utilize the contract, any requirements for separate tenants, environments, configurations, or implementation services will be determined between the participating institution and the Proposer based on that institution's specific needs. A separate contract would not be required unless material changes to the existing contract terms are necessary. Proposers may propose volume discount structures; however, proposed pricing should be based on UNC-Chapel Hill's stated requirements and estimated volumes. The University makes no commitment regarding participation by other UNC System institutions.

THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

10. Question: Please provide a detailed annual volume breakdown by document type, including PO invoices, non-PO invoices, credit memos, recurring invoices, utility invoices, foreign supplier invoices, and other invoice types.

Answer: The University's estimated annual invoice volume includes approximately 35,000 PO invoices, 75,000 non-PO invoices, 700 credit memos, 450 utility invoices, and 3,300 foreign supplier invoices. Recurring invoices are not currently tracked separately. The University does not have additional invoice types to report at this time.

11. Question: Please confirm whether the remaining approximately 75,000 invoices are non-PO invoices and provide the expected scope of automation for those invoices.

Answer: Confirmed. The approximately 75,000 remaining invoices are non-PO invoices and should be addressed as part of Phase 2. The specific scope and level of automation for non-PO invoice processing should be proposed by the Proposer based on its recommended solution and approach.

12. Question: Please provide information regarding average and peak daily and monthly invoice volumes, seasonal or cyclical processing periods, and expected annual invoice volume growth during the contract term.

Answer: The University does not currently track average or peak daily invoice volumes. The average monthly invoice volume is approximately 9,200 invoices, with a peak monthly volume of approximately 12,000 invoices occurring in July, likely due to fiscal year-end processing and related cutoff activities. With the fiscal year ending on June 30, the University typically experiences increased invoice volumes leading up to fiscal year-end cutoff dates in June and following the release of new budgets in July. No significant annual invoice volume growth is expected during the contract term; invoice volumes have decreased slightly over the past three years.

13. Question: Please provide supplier-related statistics, including the number of active suppliers, the number of supplier templates or layouts currently in use, and the concentration of invoice volume among the University's top suppliers.

Answer: The University currently has more than 30,000 active suppliers and approximately 25 supplier templates or layouts. The University does not currently track the concentration of invoice volume among its top suppliers.

14. Question: Please provide invoice complexity metrics, including average and maximum pages per invoice, average and maximum line items per invoice, the percentage of native PDFs versus scanned images, and the percentage of handwritten or non-standard invoices.

Answer: The University does not currently track these complex invoice metrics and is unable to determine this information due to limitations within the existing system.

15. Question: Please provide information regarding the number of users, departments, and approval workflows involved in the University's invoice processing environment, including the number of AP users, approvers, administrators, reporting-only users, departments, and distinct approval workflows.

Answer: The University currently has six AP users and three administrators supporting invoice processing. The number of approvers, reporting-only users, and distinct approval workflows is not currently known. The University has more than 1,600 departments involved in the broader invoice processing environment.

16. Question: Please provide a breakdown of invoice intake channels and the approximate annual percentage or volume by channel, including email attachments, email body content, paper invoices, PDF uploads, supplier portals, EDI, XML/cXML, APIs, and any other intake methods.

THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

Answer: The University does not currently track invoice volumes by intake channel for email attachments, email body content, paper invoices, PDF uploads, or APIs. Supplier portal volumes are addressed in the following two responses. The University receives approximately 35,000 invoices annually through EDI from Amazon Business; however, these invoices are not in scope for this project. The University also receives approximately 40,000 invoices annually through XML/cXML from Marketplace Suppliers; these invoices are likewise not in scope for this project. There are no other invoice intake methods to report at this time.

17. Question: Are paper invoices in scope? If so, would the University consider managed scanning and digitization services?

Answer: Yes. Paper invoices are in scope, and the University is open to considering all proposed solutions, including managed scanning and digitization services.

18. Question: Please describe the current state end-to-end process for both PO and non-PO invoices, including receipt, coding, approvals, voucher creation, exception processing, and payment initiation.

Answer: For PO invoices, the department completes the receiving process in PeopleSoft and uploads the invoice through the Vendor Invoice Submission Page (VISP). The PO team then creates the voucher, and the system performs a three-way match. If the three-way match is successful, the voucher is posted and scheduled for payment. If the match is unsuccessful, the voucher is deleted and the department is notified of the exception and required correction. For non-PO invoices, invoices are received by Campus, which creates and submits a voucher in PeopleSoft. The department provides the budget information and coding, which drives the applicable approval workflow. Exceptions may be identified at any point during the approval process, in which case the voucher is returned for correction. Once the voucher has been fully approved and posted, it is scheduled for payment.

19. Question: How many invoice email inboxes currently exist, and what email platform is used (e.g., Microsoft 365, Outlook, Gmail)?

Answer: The University currently has two invoice email inboxes, both managed through Outlook.

20. Question: Please confirm which security, compliance, risk assessment, privacy, HECVAT, SOC 2, ISO, DGOG, and Information Security Office documentation must be submitted with the proposal versus after selection or prior to contract execution.

Answer: As stated in Section 3.3 of the RFP, Vendors should not submit security, compliance, privacy, or risk assessment documentation with their initial proposal submission. If a Vendor is selected for award, the University will request applicable security, compliance, privacy, and risk assessment documentation as part of the University's security review. All required documentation and approvals must be completed prior to contract execution.

21. Question: Please provide the expected security review timeline, including Information Security Office (ISO) and DGOG reviews.

Answer: The University does not have a definitive timeline for completion of the Information Security Office (ISO) and DGOG reviews at this time. The review timeline may vary based on several factors, including the complexity of the proposed solution, the responsiveness of the Vendor, and the University's review workload. To help avoid potential delays, Vendors are encouraged to have all applicable security and compliance documentation readily available upon request.

22. Question: Please identify the University's identity provider and SSO requirements, including support for Entra ID/Azure AD, Shibboleth, SAML, OIDC, SCIM provisioning, and MFA requirements. Please also identify any preferred authentication approach and whether the proposed solution should accommodate potential changes to the University's SSO platform during the contract term.

THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

Answer: The University currently utilizes SAML 2.0 SSO authentication and prefers a service-provider (SP)-initiated authentication approach. The application must support multi-factor authentication (MFA) as part of the authentication requirements. The University may implement a new SSO solution in the future and therefore encourages Vendors to identify the identity providers and authentication protocols supported by their proposed solution, including Entra ID/Azure AD, Shibboleth, SAML, OIDC, and SCIM provisioning, as applicable.

23. Question: Is multi-tenant SaaS architecture acceptable, or is a dedicated tenant or single-tenant deployment required?

Answer: A dedicated-tenant or single-tenant deployment is preferred; however, a multi-tenant SaaS architecture is acceptable. Vendors should submit pricing for both multi-tenant and single-tenant SaaS architecture options.

24. Question: Please identify the University's preferred PeopleSoft integration approach, including Integration Broker, REST APIs, SOAP services, Voucher Build interfaces, Component Interfaces, middleware/iPaaS, flat-file integration, and other approved methods.

Answer: PeopleSoft FSCM integrations with external applications may be developed using PeopleSoft Integration Broker to provide or consume web services and REST API calls using JSON for real-time interfaces. For integrations involving large transaction volumes, inbound and outbound interfaces may utilize flat-file formats, with CSV preferred, when the interfaces can be scheduled to run at defined frequencies, such as daily or weekly. The University's ITS team also utilizes Informatica to develop integrations between PeopleSoft and external applications. The integration technology and architecture, including the use of PeopleSoft Integration Broker, Informatica, real-time interfaces, or file-based integrations, will ultimately be determined based on the business requirements and transaction volumes associated with each integration.

25. Question: Will PeopleSoft APIs and services for Vendor validation, voucher creation, PO retrieval, receipt retrieval, and matching be available to the selected Vendor, and who will be responsible for any required PeopleSoft-side development?

Answer: UNC ITS-EA will be responsible for the development of integrations with PeopleSoft FSCM. The selected Vendor will be responsible for the development required to provide APIs from the Vendor's application or consume flat files provided by PeopleSoft FSCM. The specific PeopleSoft APIs and services required for Vendor validation, voucher creation, PO retrieval, receipt retrieval, and matching will be determined based on the final integration requirements and solution architecture.

26. Question: Is real-time synchronization required, or are scheduled batch integrations acceptable? If real-time integration is required, what latency expectations apply?

Answer: The choice of integration architecture, including real-time or scheduled batch integration, will depend on the University's business requirements for each integration. From a technical perspective, the UNC ITS-EA team is flexible and can support PeopleSoft integrations using either real-time or scheduled batch approaches. Specific latency requirements, if applicable, will be determined based on the business requirements and the selected integration architecture.

27. Question: Please clarify the University's invoice matching and exception requirements, including two-way and three-way matching requirements, receipt sources, tolerance rules, exception scenarios, and the approximate percentage of receipt-based purchase orders.

Answer: Two-way matching is required only for advanced payments where receiving requirements have been turned off. Three-way matching is required for all other PO invoices. Receipts are provided by the applicable department. The tolerance rule is the lesser of 15% or \$500 per PO line. Exception scenarios include missing receipts, invoices that exceed the applicable tolerance or available PO funding, and

THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

supplier mismatches. The majority of purchase orders are receipt-based, representing approximately 95% of POs.

28. Question: Will the solution have access to the vendor, PO, receipt, and master data required to perform invoice matching and validation?

Answer: Yes. The selected solution will have access to the vendor, purchase order (PO), receipt, and master data required to perform invoice matching and validation.

29. Question: Please provide additional details regarding UNC policies and business rules that must be applied, including the number of policies, approval rules, coding rules, supplier validation rules, compliance checks, tolerance rules, and common policy violations.

Answer: The University currently has 19 applicable policies. There are no approval rules for PO vouchers. Approval rules for non-PO vouchers vary based on requirements established by the department and may include funding source, account code, payments to independent contractors (ICs), and total invoice amount. Coding rules require the budget information, including the applicable chartfield string, to be checked for completeness and accuracy. Supplier validation must ensure that the correct supplier is selected based on the information provided. Compliance checks are incorporated into the approval workflow process. For PO invoices, the applicable tolerance is the lesser of 15% or \$500 per PO line. A common policy violation occurs when suppliers submit a PO invoice for expense reimbursement that was not included in the original PO.

30. Question: Will the University's policies be provided in documented and/or machine-readable format, and who will be responsible for policy maintenance and updates?

Answer: Yes. The University will provide the applicable policies in the available documented format. The University will be responsible for maintaining and updating the policies throughout the contract term.

31. Question: Please clarify the "Custom Business Rules" requirements and provide an estimate of the number of custom rules Vendors should assume for solution sizing and pricing.

Answer: Custom business rules will vary based on requirements established by individual departments, as well as University-wide business rules and processes. Examples include requiring approval from the Office of Sponsored Programs for invoices charged to sponsored projects that meet specific thresholds and pre-audit classification of invoices based on specific account codes or vendor types, such as employees. The University is unable to provide a definitive estimate of the number of custom business rules at this time. Vendors should account for the potential variability in custom business rules when developing their proposed solution, sizing, and pricing.

32. Question: Please describe the current approval workflow structure, including approval levels, routing rules, department-based approvals, dollar thresholds, delegation, escalation rules, and out-of-office processing.

Answer: The current approval workflow may include Pre-Audit, Department, Office of Sponsored Programs (OSP), Independent Contractor (IC) and Foreign Vendor review, and Accounts Payable (AP) team review. Routing requirements vary based on the characteristics of the invoice and may include routing for ICs, Foreign Vendors, OSP review, pre-audit based on specific account codes, and employee classification at certain dollar amounts. Department-based approvals are established by each department and may consist of either a single approval step or multiple approval steps. Invoices over \$5,000 require a Purchase Order. The University does not currently have delegation, escalation, or out-of-office processing rules in place.

33. Question: Are approvals expected to remain in PeopleSoft, or must the proposed solution provide approval workflow functionality?

THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

Answer: The University's current vision is for approval workflows to remain in PeopleSoft. However, the University is open to alternative recommendations from Proposers regarding the use of approval workflow functionality within the proposed solution, provided the recommended approach meets the University's business and integration requirements.

34. Question: Please describe the University's current exception processing requirements, including common exception types, ownership of exception resolution, required service levels, routing logic for exceptions, and whether Vendors may provide managed exception-processing services.

Answer: The most common exception types are invoice matching exceptions. Accounts Payable is responsible for resolving exceptions. The University does not currently have defined service levels for exception resolution; service levels will be based on the proposed solution and approach. The University does not currently route invoice submissions based on exceptions. Vendors may propose managed exception-processing services as part of their solution.

35. Question: Is human review required before voucher creation or posting, or may high-confidence invoices be processed completely touch-free?

Answer: High-confidence invoices may be processed completely touch-free without requiring human review prior to voucher creation or posting.

36. Question: Please clarify the invoice data extraction and capture requirements for each implementation phase, including header-level and line-item extraction requirements, required extraction accuracy levels, target straight-through processing rates, and acceptance criteria for invoice capture accuracy.

Answer: For Phase 1, the solution must be capable of extracting key invoice data, including vendor, purchase order number, invoice date, line-item detail, and total price, and matching the extracted information against the corresponding PO data in PeopleSoft. For Phase 2, the required extraction data will be similar; however, Proposers should describe how the solution can use the extracted information to create vouchers for non-PO invoices. The University has not established specific extraction accuracy levels, target straight-through processing rates, or invoice capture accuracy acceptance criteria at this time. Proposers should identify their recommended accuracy levels, straight-through processing rates, and applicable acceptance criteria as part of their proposed solution.

37. Question: Please confirm that references to "transcripts" in Sections 3.5.2 and 3.5.5 should instead refer to "invoices."

Answer: Confirmed. References to "transcripts" in Sections 3.5.2 and 3.5.5 should be interpreted as references to "invoices."

38. Question: Are multilingual, foreign-currency, handwritten, image-based, utility, credit memo, and other non-standard invoice types within scope?

Answer: Yes. Multilingual, foreign-currency, handwritten, image-based, utility, credit memo, and other non-standard invoice types are within scope.

39. Question: Please clarify the University's expectations regarding AI capabilities, including generative AI, policy interpretation, coding recommendations, conversational AI, and explainability and auditability.

Answer: As the subject matter expert on its proposed solution, the Vendor is expected to articulate the capabilities of its solution and make recommendations regarding how those capabilities can be leveraged to interpret University policies, support coding requirements, and improve invoice processing. Vendors should describe any applicable AI and generative AI capabilities, including policy interpretation, coding recommendations, and conversational AI functionality. Vendors should also explain how the outputs and decisions generated by the solution can be reviewed, explained, validated, and audited, including the availability of appropriate audit trails and supporting documentation.

THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

40. Question: Please reconcile the AI learning requirements with the restrictions in Exhibit B regarding model training and the use of university data.

Answer: University information and input may be used by the contracted Vendor solely to support AI learning requirements associated with this project. Such University information and input may not be used by the contracted Vendor for any other instances, customers, products, or services outside of this project.

41. Question: Does the University have any preferred or prohibited AI technologies, large language models (LLMs), optical character recognition (OCR) engines, or AI platforms?

Answer: No. The University does not have any preferred or prohibited AI technologies, LLMs, OCR engines, or AI platforms at this time.

42. Question: Please identify the University's requirements for reporting, including required reports, key performance indicators (KPIs), dashboards, self-service reporting, and business intelligence (BI) platform integration.

Answer: Reporting requirements will depend on the capabilities and functionality of the proposed solution; however, all applicable reports, KPIs, dashboards, and reporting data must be accessible to the University. Vendors should describe the reporting, dashboard, self-service reporting, and BI integration capabilities available within their proposed solution.

43. Question: What audit trail requirements apply, including field-level history, user action logs, AI confidence scores, and retention requirements?

Answer: Yes. The solution must capture the applicable field-level history, user action logs, and AI confidence scores in the audit trail. Audit trail information must be retained for a minimum of five years following the end of the fiscal year in which the invoice is paid.

44. Question: What University resources will be assigned to the project, including Accounts Payable (AP) subject matter experts (SMEs), PeopleSoft developers, project management, security personnel, and business stakeholders?

Answer: The University expects to assign Accounts Payable (AP) subject matter experts, Information Technology developers, and Project Management resources to support the project. Additional University resources may be engaged as needed based on the requirements and activities of the implementation.

45. Question: Please clarify the University's training expectations, including train-the-trainer, end-user, and administrator training, training volumes by role, and preferred delivery methods.

Answer: The University requires train-the-trainer, end-user, and administrator training. Train-the-trainer and administrator training may be delivered either in person or virtually and must include user documentation. End-user training must include user documentation and will be consumed on an ad hoc basis. The anticipated number of participants for administrator training and train-the-trainer sessions is approximately 20 users. The University does not have a specific preference for in-person versus virtual delivery for train-the-trainer or administrator training.

46. Question: Please provide the University's support requirements, including support hours, severity definitions, response times, resolution service-level agreements (SLAs), hypercare expectations, and 24x7 support requirements.

Answer: Support requirements will depend on the proposed solution. Vendors should define their proposed support model in their proposal, including support hours, severity definitions, response times, resolution SLAs, hypercare support, and any available 24x7 support options. The University will evaluate

THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

the proposed support model based on the needs of the solution and the University's operational requirements.

47. Question: Please clarify how Vendors should price the proposed solution, including software licensing/subscription, invoice transaction fees, AI consumption fees, support, training, travel, implementation services, and integration services.

Answer: Vendors should provide pricing for each applicable item identified in Attachment D as part of their proposal response. AI consumption fees should be included in the cost per invoice processed. Travel costs should be included with the associated service, such as training or implementation, rather than priced as a separate line item. Integration services should be included in the implementation cost. Vendors may propose an alternative pricing model; however, the proposed pricing must include all services identified in Attachment D and clearly identify any additional fees or costs associated with the proposed solution.

48. Question: Is the "Cost Per Invoice Processed" line item intended to represent a standalone transaction fee, an alternative pricing method, or a component of a broader commercial pricing model?

Answer: Vendors may determine whether there is a cost per invoice processed or whether the cost is included as part of an overall annual cost or other proposed pricing model. Regardless of how pricing is structured or presented, all costs must be clearly itemized in the proposal and Attachment D.

49. Question: Should pricing assume approximately 110,000 invoices annually, and is there any minimum invoice volume commitment?

Answer: Pricing should require approximately 35,000 invoices annually for Phase 1 and an additional 75,000 invoices annually for Phase 2, for a total estimated annual volume of approximately 110,000 invoices when both phases are implemented. The University does not provide a minimum invoice volume commitment.

50. Question: Will proposals offering predictable bundled pricing for software, implementation, support, and managed services be evaluated favorably under total cost of ownership (TCO) considerations?

Answer: All proposals will be evaluated using the same evaluation criteria, regardless of the pricing model or structure proposed. Vendors may offer bundled pricing; however, bundled pricing will not receive preferential consideration solely based on its structure.

51. Question: Please provide the evaluation weights, scoring methodology, and any demonstration scoring criteria that will be used to evaluate proposals.

Answer: The University will evaluate proposals based on the criteria outlined in Section 5.2 of the RFP and will make an award based on the proposal determined to provide the best value to the University. Specific evaluation weights, scoring methodology, and demonstration scoring criteria will not be provided. If demonstrations are conducted, additional instructions and requirements will be provided to shortlisted Vendors. The University reserves the right to make an award based on the proposal determined to represent the best value to the University, taking into consideration all applicable evaluation factors and the overall interests of the University.

52. Question: Please clarify what characteristics the University considers an "intuitive user interface."

Answer: As the subject matter experts on their proposed solutions, Vendors are expected to provide a solution with an intuitive, user-friendly interface that promotes high user acceptance. Vendors should describe the usability and user experience features of their proposed solution and explain how the solution supports ease of use, efficient navigation, and user adoption.

THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

53. Question: Please confirm the University's requirements related to hosting model, approved cloud providers, approved geographic regions, and U.S.-only hosting requirements, including the requirements outlined in Item 39 of Attachment B.

Answer: As the subject matter experts on their proposed solutions, Vendors should recommend the hosting model that best supports their proposed solution, including the appropriate SaaS, on-premises, single-tenant, or multi-tenant architecture. The University does not have any specific approved cloud providers. In accordance with Item 39 of Attachment B, hosting must be located within the United States unless otherwise agreed to in a document signed by duly authorized officers of both parties.

54. Question: Please clarify the University's invoice and document retention requirements, including archival requirements and applicable records retention periods.

Answer: Invoices and related documentation must be maintained for a minimum of five years following the end of the fiscal year in which they were processed.

55. Question: Please clarify the insurance requirements, including whether cyber liability requirements are cumulative or may be satisfied through a single policy.

Answer: Cyber liability insurance coverage must be no less than \$1,000,000, regardless of whether the coverage is provided through a standalone policy or as part of a broader insurance policy.

56. Question: Please confirm the required accessibility standards, including WCAG 2.1 AA, WCAG 2.2 AA, ADA Title II requirements, and VPAT expectations.

Answer: The proposed solution must comply with WCAG 2.2 Level AA and applicable ADA Title II requirements, as outlined in Item 48 of Attachment B.

57. Question: Please clarify whether source-code escrow requirements apply to SaaS solutions.

Answer: The University's source-code escrow requirements, if applicable, will be determined based on the proposed solution and contract requirements.

58. Question: Please clarify PCI applicability for this solution and whether cardholder data is expected to be processed.

Answer: Cardholder data is not expected to be processed as part of this solution. Accordingly, PCI requirements applicable to the processing of cardholder data are not anticipated to apply.

59. Question: Please clarify data ownership, AI output ownership, AI training rights, and use of de-identified data.

Answer: Data ownership and related rights are defined in Item 30 of Attachment B.

60. Question: Please confirm whether third-party AI providers or LLM services are permissible if all processing occurs within approved U.S.-based environments.

Answer: Yes. Third-party AI providers and large language model (LLM) services are permissible provided that all applicable processing occurs within approved U.S.-based environments and complies with the requirements of the RFP and Attachment B.

61. Question: Please clarify backup, business continuity, disaster recovery, RTO, and RPO requirements.

THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

Answer: Please refer to Item 40 of Attachment B for the University's requirements related to backup, business continuity, disaster recovery, recovery time objectives (RTO), and recovery point objectives (RPO).

62. Question: Please clarify offshore resource restrictions and approval requirements.

Answer: Please refer to Item 39.a. of Attachment B regarding the University's requirements regarding offshore resources and applicable approval requirements.

63. Question: Please clarify acceptance testing criteria, UAT procedures, success metrics, and approval processes.

Answer: Acceptance testing criteria, UAT procedures, success metrics, and approval processes will depend on the selected solution and will be determined during the implementation based on the proposed solution, applicable requirements, and mutually agreed-upon implementation approach.
